Introduction

Campus Connect Directory is a web-based platform created to serve as a comprehensive hub for information about student clubs and their activities at Addis Ababa Science and Technology University (AASTU). It is designed to make it easier for students to explore the wide range of extracurricular opportunities available on campus, learn about the goals and functions of each club, stay updated on upcoming events, and directly access club contact information through platforms like Telegram and LinkedIn. The platform provides a structured and organized view of all campus clubs, helping students make informed decisions about which groups to join and participate in. Developed entirely as a frontend-only website using HTML, CSS, and JavaScript, the project emphasizes simplicity, accessibility, and interactivity, ensuring that users can navigate and use the directory effectively without the need for external frameworks or complex setups. By consolidating all club-related information in one place, the platform reduces confusion, saves time, and encourages active student engagement in campus life.

Context

Background Information and Environment

Universities host various student clubs that support academic, social, cultural, and professional development. However, information about these clubs is often scattered across notice boards, social media, or informal communication channels. At AASTU, freshmen students especially face difficulties in identifying which clubs exist, what activities they conduct, and how to join them.

The Campus Connect Directory is intended to operate in a university environment and be accessed through web browsers on desktops and mobile devices. The system provides a single platform where students can view club listings, upcoming events, and club contact information, making club engagement more accessible and organized.

Motivation

The main motivation for this project comes from our own experience as freshman students. When we first joined the university, we struggled a lot to find clubs that matched our interests. We did not know what types of clubs were available, what activities they were involved in, or how to join them. Most information was unclear, scattered, or shared only through informal ways.

Because of this, we often missed opportunities to join clubs that could help us improve our skills, meet new people, and become more active on campus. We wished there was a single website where all club information was clearly organized and easy to access. This problem motivated us to build the Campus Connect Directory so that new students can easily explore clubs, understand what they do, see upcoming events, and join the clubs they are interested in without confusion or difficulty.

Objectives

General Objective

To develop a user-friendly campus directory website that provides centralized information about university clubs and events to improve student engagement.

Specific Objectives

- ✓ To list all registered campus clubs at AASTU in an organized and accessible manner.
- ✓ To provide brief descriptions explaining the purpose and activities of each club.
- ✓ To display upcoming events related to campus clubs.
- ✓ To allow administrators to add new clubs to the directory.
- ✓ To enable administrators to add and update event information.
- ✓ To provide direct contact links such as Telegram and LinkedIn for each club.
- ✓ To design a simple and intuitive user interface using HTML and CSS.
- ✓ To implement interactive features using JavaScript without external frameworks.
- ✓ To ensure the website is responsive and usable on different screen sizes.
- ✓ To help freshmen and new students easily discover clubs that match their interests.
- ✓ To reduce the difficulty and time required for students to find club information.
- ✓ To encourage student participation in extracurricular activities through better information access.

Functional Requirements

The Campus Connect Directory should include the following features to make it useful for students and easy to manage by admins:

- 1) Display a complete list of all campus clubs at AASTU.
- 2) Show a short description for each club so students understand what the club does.
- 3) Allow students to click on a club to see more detailed information.
- 4) Display upcoming events organized by the clubs.
- 5) Show event details such as name, date, and description.
- 6) Provide Telegram contact links for each club to allow direct communication.
- 7) Provide LinkedIn contact links for each club.
- 8) Allow admins to add new clubs.
- 9) Allow admins to update existing club information
- 10) Allow admins to add new events.
- 11) Allow admins to update event information.
- 12) Be accessible on any standard web browser.
- 13) Offer a simple and easy-to-use interface for all students.

Corresponding Requirements

The features of the Campus Connect Directory are designed to support the main goals of the project in different ways. First, listing all campus clubs and showing short descriptions for each (**requirements 1–3**) helps students easily see what clubs exist

and understand what each club does. This is especially useful for freshmen or new students who may not know where to start, as it allows them to quickly find clubs that match their interests and preferences. By organizing all this information in one place, students can save time and avoid confusion.

Next, displaying upcoming events along with details like name, date, and description **(requirements 4–5)** ensures that students are always informed about what is happening in the campus community. Being aware of events encourages students to participate more actively, get involved in different activities, and feel connected to campus life. This feature also helps clubs promote their events to a wider audience, which increases participation and engagement.

Providing contact links such as Telegram and LinkedIn **(requirements 6–7)** makes it easier for students to communicate directly with the clubs. Students can ask questions, join a club, or get more details about events without having to search for separate contact information. This direct connection improves communication and encourages more students to join clubs and be part of campus activities.

The admin features, which allow adding and updating clubs and events **(requirements 8–11)**, make sure that all information is accurate and up-to-date. Clubs and events can change over time, and having an easy way to manage this ensures that students always see correct and reliable information. This also reduces the chances of outdated or missing information, which could confuse students or prevent them from participating.

Finally, making the directory accessible through standard web browsers and offering a simple, easy-to-use interface **(requirements 12–13)** ensures that everyone, including new students, can navigate the website without any difficulty. The design focuses on simplicity, so students can find clubs and events quickly, even if they are not very familiar with using websites.

Overall, all these features work together to make it much easier for students to explore clubs, connect with the right people, and participate in campus life without confusion or unnecessary effort. The directory not only helps students but also supports clubs in reaching more members and sharing information effectively.

Significance : Why the system is important?

The Campus Connect Directory is important because it addresses a real and common problem faced by many university students, especially freshmen. When students first join the university, they often do not know what clubs are available, what each club focuses on, or how to get involved. Information about clubs is usually scattered across different platforms, notice boards, or social media pages, which makes it difficult for students to find clear and reliable details.

By bringing all club-related information into one website, the system provides a central and organized source of information. Students can easily explore different clubs, read short descriptions, check upcoming events, and find contact links without confusion. This makes the process of joining clubs simpler and less time-consuming. As a result, the system helps increase student participation, improves communication

between students and clubs, and supports a more active and engaged campus community.

Beneficiaries

The main beneficiaries of the Campus Connect Directory are students, especially freshmen and new students. They benefit by having easy access to clear and organized information about campus clubs and upcoming events. This helps them make better decisions about which clubs to join based on their interests.

Campus clubs also benefit from the system because it gives them a platform to introduce themselves to a wider audience. By sharing descriptions, events, and contact links, clubs can attract more members. In addition, club administrators benefit by having a single place to manage and share club-related information. Overall, the university community benefits because the system encourages student participation and strengthens communication between students and clubs.

Feasibility Analysis

From a technical point of view, the Campus Connect Directory is highly feasible because it is built using basic and widely used web technologies such as HTML, CSS, and JavaScript. These technologies are easy to learn, well documented, and commonly used in web development. The system does not depend on any backend services, databases, or external frameworks, which reduces technical complexity. All required features, such as displaying club information, listing events, and handling basic admin actions, can be implemented using simple frontend logic. Since the website runs directly in standard web browsers, it can be accessed on different devices without requiring special software or installations. This makes development, testing, and maintenance straightforward for student developers.

From an economic point of view, the project is also feasible because it does not require any financial cost. All the tools used for development, such as code editors and web browsers, are free and easily available. The project does not need paid hosting services, servers, or databases, which helps keep costs at zero. Because no licensed software or third-party services are required, the system can be developed and maintained without any budget. This makes the project suitable and realistic for an academic and student-level implementation.

From an operational point of view, the system is easy to operate and use for all users. Students can access the website and browse clubs and events without needing any prior training or technical knowledge. The interface is designed to be simple and clear, allowing users to find information quickly. Administrators can also manage club and event information through simple actions, making content updates easy. Due to its simplicity, clarity, and user-friendly design, the system can be smoothly adopted and used in a real university environment without causing operational difficulties.

System Evolution (Comparison)

Existing System

Information about campus clubs and events is disseminated through a combination of:

- ✓ Physical notice boards
- ✓ Social media pages (scattered across Facebook, Telegram, etc.)
- ✓ Word of mouth
- ✓ Occasional emails from student unions
- ✓ Paper-based sign-ups at club fairs

Use case diagram - Existing System

Problems and Limitations

- ✓ Fragmented Information: Club details scattered across multiple platforms.
- ✓ Lack of Real-Time Updates: Physical boards updated infrequently.
- ✓ No Centralized Directory: No single source lists all active clubs.
- ✓ Poor Contact Accessibility: Students must search individually for contact links.
- ✓ Manual Administrative Effort: Club leaders must repost information across platforms.
- ✓ No Persistent Event Calendar: Events disappear from social media feeds.
- ✓ Limited Accessibility: Physical boards only visible on campus.

Proposed System

A centralized, web-based portal where students can browse all registered campus clubs, view their details and events, and access verified contact links — all managed by an admin for accuracy and timeliness.

How It Fixes the Old System:

- ✓ Unified Information Hub: All clubs listed in one organized location.
- ✓ Real-Time Updates: Instant admin updates ensure current information.
- ✓ Centralized Directory: Searchable list simplifies club exploration.
- ✓ Direct Contact Links: Verified links save search time and ensure authenticity.
- ✓ Streamlined Administration: Single interface reduces repetitive posting.
- ✓ Organized Event Calendar: Clear display of past and upcoming events.
- ✓ Accessible Anywhere: Web-based access from any device with internet.
- ✓ User-Friendly Interface: Intuitive design encourages regular use.

Use case diagram - Proposed System

The proposed system transforms a **disconnected, manual, and inefficient** process into a **centralized, real-time, and accessible** platform enhancing student engagement, reducing administrative overhead, and ensuring reliable campus communication.

Adaptive Features

This project innovates by centralizing campus life into a single, high-performance hub that replaces messy, unorganized social media groups. Its modern "glassmorphism" design makes the directory feel like a premium mobile app rather than a boring

website, providing a clean and professional visual experience. Most importantly, the system is adaptive: it uses smart logic to filter content in real-time as you type and automatically reconfigures its forms and social links based on whether you are looking at clubs or events, ensuring the interface always stays simple and relevant to your needs.

Demonstration

- ✓ Hero Section(In light and dark theme)

- ✓ The club section (You can add or view list of clubs here, filter by topics, access their social media links,...)

- ✓ The events sections (View or add Upcoming events from clubs registered here you can view the details of the time and place,...)

Thank you!
